

# Epilepsy

NCEPOD are currently looking at the quality of care delivered to **patients aged 18 years and above with epilepsy** following a seizure. The aim of the study is to produce recommendations for healthcare professionals on how to improve the care they provide and guidance for patients and families on what care they should expect to receive.

As part of the study, we are asking patients with epilepsy about their most recent visit to hospital following a seizure and their views on the care that they received in a short anonymous online survey.

If you are interested in completing the online survey please go to:
